Project number: 2020/18

PO number: 18-OCTO2020

Testing date: October 2020

Verification of the effectiveness and efficiency of the Air For Life Car Sanitizer (AFLCAR®) incorporating Air For Life UK LTD proprietary technology AFLPCO® for Octo Telematics PurePlace car system in sanitation of air inside a car compartment.

Air For Life Car Sanitizer assembly S/N 000856

Test performed on board of a small / medium size car, according to the test procedure attached (annex A), using Petri dishes for environment characterization and samples collection in different testing points, and subsequent bacterial growth monitoring after 48 hours incubation.

Applying the system for the specified time (after 30 and 60 minutes respectively), the bacterial load is progressively reduced to a bacteria colonies average ≤ 5 cfu after 60 minutes of sanitation for all the sampling points. These results indicate at least a grade B level in the **European Union Good manufacturing Practice** scale, meaning a pre-aseptic ambient. The grade A indicates aseptic condition (annex B)
